Introduction

This is the 2014 edition of the International Studbook for the Persian Leopard - *Panthera pardus saxicolor*.

The last studbook has been published in 2014 with the data current to 31/12/2013, thus the present edition covers the year 2014 with data at least current to 31/12/2014.

At 31/12/2014 the Persian Leopard EEP had 42.43 leopards in 39 institutions (Fig. 1). Additional 26.11 leopards in 17 institutions are registered in the studbook, but are not part of the EEP, which make a total of 68.54 leopards in 56 institutions (ISB population). There are also 6.3 hybrids in 3 institutions that are being monitored (studbook number in orange colour font). The EEP population has been stable (or slightly increasing) but it needs to increase to 200 leopards and currently there is not enough space assigned.

This population has only 9 founders and therefore there is a need to get new founders for this EEP. Contacts were done in order to get two more founders from other regions.

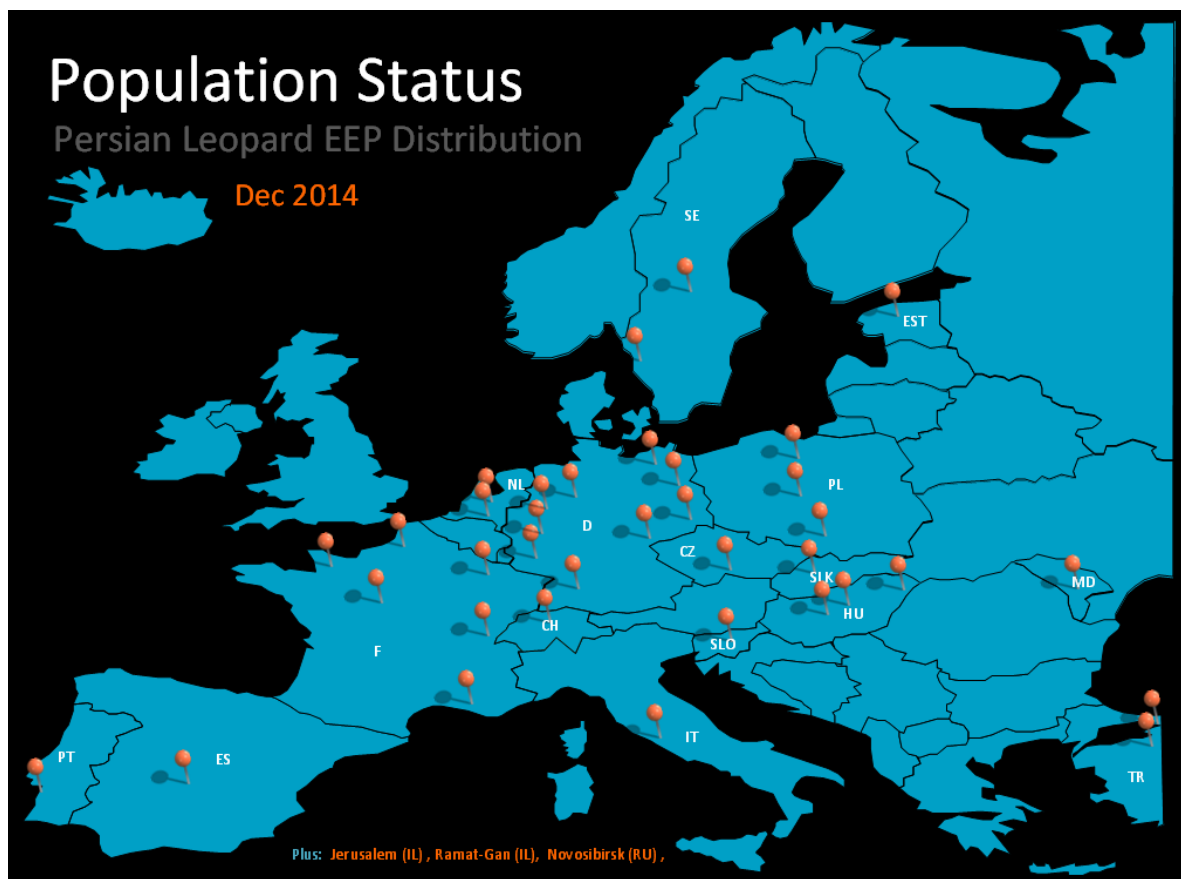

Fig. 1 - Persian Leopard Distribution Map

The main goals of the Persian Leopard EEP are:

- To increase the captive population to 200 leopards. The EEP is looking for new holders and, in 2014, 5 new participants were added: 3 non-EAZA Institutions 1 EAZA temporary member and 1 full member;
- To increase the genetic composition of the population by introducing new founders. The EEP population has only 9 founders and therefore the EEP is in contact with Sochi Leopard Breeding Centre in order to arrange the transfer of the one year old hand-raised leopard from Sochi to the EEP;
- To improve the “quality” of individual leopards through improving management and holding facilities in different participating zoos. The EEP/ISB is working on a Husbandry Questionnaire to be sent to all institutions keeping Persian leopards in order to get a global view on this issue and then act.

Conservation Activities

Russia:

In October 2014, Alex Sliwa (EAZA Felid TAG Chair), Urs Breitenmoser (IUCN Cat Specialist Group) and Marianne Hartmann (IUCN Cat Specialist Group) and José Dias Ferreira (PL EEP Coordinator) travelled to Sochi Breeding Centre (SBC) for advisory work and negotiations.

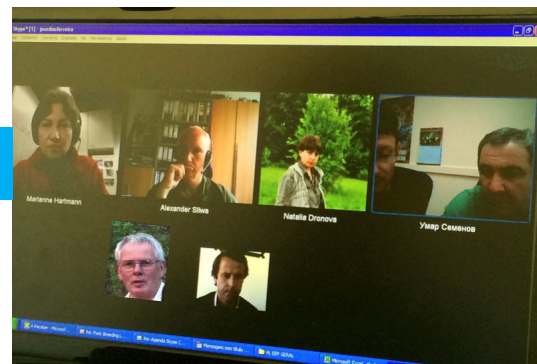

Fig. 1 – CLRAG in SBC

In the beginning of 2014, the Caucasian Leopard Reintroduction Advisory Group (CLRAG) implemented a bimensal skype call (1,5 hour duration) with the SBC Director and WWF Russia, in order to discuss husbandry issues, animal exchanges and rewilding processes. This proved to be the best way to exchange information between the different institutions/organizations.

Fig. 2 – Bimensal skype call

In November 2014, two males (Caucasus - #T752, Arkhyz - #T753) and one female (Sulakhat, #T754) leopards were born from the pair Alous (#T736) x Andrea (#596) at SBC. This litter came from a pair with a non-breeding recommendation and since they are related with all the leopards being prepared for reintroduction (Fig 3), they are unsuitable for reintroduction. Therefore, the EEP issued a recommendation to transfer these animals to the EEP and they will be soon in a breeding situation (since they have founder genes from the father’s side, they are valuable for the programme).

Azerbaijan:

In May 2014, the Persian Leopard EEP Coordinator attended the “Caucasus Cat Summit” (Fig. 12) organized by International Dialogue for Environmental Action campaign (IDEA) in Baku, Azerbaijan. This Summit gathered an audience of policymakers, wildlife experts and conservationists from all over the world to discuss the conservation of the Persian leopard in Azerbaijan.

Sex:

M for male,
m for castrated male,
F for female,
f for contracepted/neutered female,

A tilde mark, '~', before a date indicates that it is approximate.
'??' indicates that the date is unknown.

Sire and Dam: Studbook numbers for the animal's sire and dam.

'UNK' if unknown.

'MULT' if several candidates have been identified.

'WILD' if the sire or dam was considered to be wild - this animal is a founder.
